## SUMMARY

---

Backend Developer with expertise in Java and Spring Boot, specializing in secure REST APIs, event-driven architecture with Apache Kafka, and distributed systems using Redis and MongoDB. Experienced with Spring Security, JWT, PostgreSQL, Docker, and deploying production-grade applications on cloud platforms.

## PROJECTS

---

### **Real-Time Gaming Event Streaming Platform** | *Java, Spring Boot, Apache Kafka, Redis, MongoDB, Docker* | [Github](#)

- Designed async event ingestion pipeline where REST API publishes player events (kills, achievements, level-ups) to Kafka, returning 202 Accepted immediately without blocking on DB writes
- Implemented Kafka consumer that persists raw events to MongoDB and maintains sliding-window aggregates in Redis Sorted Sets for  $O(\log n)$  real-time stat queries
- Used playerId as Kafka partition key to guarantee ordered processing of per-player events
- Containerized Kafka (KRaft mode), MongoDB, and Redis with Docker Compose for single-command deployment

### **Wanderly** | *Java, Spring Boot, PostgreSQL, Redis, Groq API, Docker* | [Github](#) | [Site](#)

- Architect-ed a modular monolith with feature-based package structure (user, trip, destination, ai modules) enabling high cohesion and loose coupling — designed for future microservice extraction
- Integrated Groq LLM API with structured prompt engineering — system prompts enforce strict JSON response format mapped directly to typed Java DTOs (Itinerary, DayPlan, Activity)
- Reduced AI API latency by 95% on cache hits using manual Redis caching with configurable TTL — cache key built from destination, duration, budget and interests to ensure correctness
- Containerized backend using multi-stage Docker build with Alpine JRE reducing final image size — pushed to Docker Hub and deployed on Render with environment-based configuration for zero local/prod code differences

### **Blog application Backend** | *Spring web , Spring security , swagger, Jpa, postgresSQL, hibernate, JDBC , Maven* | [Github](#)

- Designed and implemented a RESTful blog platform backend with role-based authentication using SpringSecurity.
- Built an admin dashboard API to manage categories, tags, and publish/delete blog posts dynamically.
- Utilized JPA and Hibernate for ORM, ensuring efficient database interaction with PostgreSQL.
- Integrated Swagger for API documentation, simplifying testing and developer onboarding.

## TECHNICAL SKILLS

---

**Languages:** Java ,C++

**Backend:** Springboot FrameWork , Spring MVC , Spring JPA , Spring Security , Spring Ai , Apache Kafka, Redis

**Database:** MySQL, H2, PostgreSQL ,MongoDB

**Developer Tools:** Git, Github, Postman, Docker, AWS, IntelliJ Idea, Maven , Render , Railway

## EDUCATION

---

### **Gurukul Kangri Deemed to be University**

*Bachelor of Technology in Computer Science and Engineering - 8.37 CGPA*

Haridwar, India

*Nov. 2022 – 2026*

### **Kendriya Vidyalaya Sector 5 Dwarka**

*Intermediate - 87%*

Delhi, India

*April. 2020 – Mar 2021*

## ACHIEVEMENTS

---

### **Innervex Hackathon at AIT Pune**

*Winner - MLH Sponsor Track - Best Use of Vultr*

31 Jan 2026

### **NTSE Stage 1 Qualified**

2018-19

## CERTIFICATIONS

---

**Java Spring Boot Framework** : Udemy | **Enhancing Soft skills and personality** : NPTEL
